AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q75898

U.S. Application No.: 10/621,447

**AMENDMENTS TO THE SPECIFICATION** 

Please delete the present Abstract of the Disclosure.

Please add the following new Abstract of the Disclosure:

A channel estimation apparatus in a digital communication system is disclosed, which

includes: a correlation unit for obtaining a correlation function of a first received signal by means

of a correlation between-correlating a received synchronizing signal and a reference

synchronizing signal, and obtaining a correlation function of the received synchronizing signal

by a correlation between the synchronizing signals, a first estimating unit for estimating a first

multi-path by applying a first threshold value to the correlation function of the first received

signal, a correlation noise removing unit for obtaining a correlation function of a second received

signal by removing correlation noise included in the correlation function of the first received

signal, by a first multi-path, and a second estimating unit for estimating a second multi-path by

applying a second threshold value to a correlation function of the second received signal in

which the correlation noise has been removed.
